Top 5 Steps to Securely Work from Home

We know that working from home can be new to some of you, perhaps overwhelming as you adjust to your new environment. We know that working from home can be new to some of you, perhaps overwhelming as you adjust to your new environment. One of our goals is to enable you to work as securely as possible from home. Here are some simple steps to working securely. The best part is all of these steps not only help secure your work but they will make you and your family far more safe as you create a cybersecure home.

1. **Password Security**

   - **Change the default administrator password:** The administrator account is what allows you to configure the settings for your wireless network. It is possible for anyone to connect to your wireless network. The passwords people use to connect to your wireless network must be strong so that only people you trust can connect to your wireless network. Strong security so that only people you trust can connect to your wireless network. Make passwords strong: Allow only people that you trust to have access to your wireless network. Strong security so that only people you trust can connect to your wireless network. Strong security so that only people you trust can connect to your wireless network. The passwords people use to connect to your wireless network must be strong.
